

Which are the hottest current issues in Diabetes? How can I research & write a paper on the topic?

Understanding diabetes traditional types and novel subtypes is a key part of the training of any Health Science professional. In this Blended Intensive Program (BIP) you will learn how current therapies in diabetes work, discuss novel therapies, and analyse the main factors impairing life quality. Participants will also be trained on soft skills related with scientific-paper writing and will develop a collaborative work project together with a group of international students.
